

VA 65

DESCRIPTION

The **VA 65** vehicle antenna is designed for assembly on the car roof.

The antenna is designed for the vehicle radiostations system TETRA in the frequency band from 410 to 425 MHz.

TECHNICAL SPECIFICATION

Type		VA 65
Frequency	MHz	410 ÷ 425
Gain	dBi (dBd)	2 (0)
Radiation pattern		omnidirectional
Wave length		$\lambda / 4$
Impedance	Ω	50
VSWR		< 1.8
Maximal input power	W	30
Hole round	mm	$\varnothing 19$
Material		Plastic, stainless steel
Weight	kg	0.2
Connector		type "BNC" or "TNC" - male

Note:

The VA 66 vehicle antenna ends by a coaxial cable, length of 3,5m and by a "BNC" / male or "TNC" / male connector according to the order.
